

Moulding Sand

Playdough Recipe

You will need:

12 cups clean play sand

6 cups cornflour

3 cups water

Large bowl or bucket

A large tray

Method

1. In a large bowl or bucket, mix the sand and cornflour together.
2. Add 2 cups of water and mix well.
3. Slowly add the final cup of water, although you may not need it all. Keep adding and kneading until you reach the desired consistency.
4. The finished sand can be kept for a week in a sealed container. You may need to add a tablespoon more water to the mixture on the second day of play.
5. You may like to add shells, buckets, spades and flags to extend the beach theme.

*This recipe is intended to be used as soon as it has been made and up to a week afterwards. It is not to be stored for future use after this.
